

# Trakkaway luxury home on wheels

**T**RAKKA'S Trakkaway 830 takes motorhome space and luxury to a new level.

Based on the Fiat Ducato with a dual rear axle, the Trakkaway 830 is so spacious that it has a separate bedroom with 'island' double bed, separate shower and bathroom cubicles, a gourmet kitchen and a spacious dining and seating area.

Yet, on the outside, it is little larger than a normal motorhome.

The Trakkaway 830 is powered by Fiat's acclaimed 3-litre, 115.5kW turbo diesel engine matched to a gearbox designed with specific programs for motorhome use.

It provides the economy and performance of a manual gearbox and the convenience of an automatic.

The Sydney-based motorhome company chose the Fiat Ducato for its newest model because only the Ducato could offer a chassis that made all of Trakka's advances in design and technology possible.

The Al-Ko chassis, with its twin or tandem rear axles, is substantially lower than a normal single rear axle set-up, which, combined with com-

pact suspension, maximises space available for the motorhome and allows bigger payloads.

Additionally, by reducing the centre of gravity, stability is enhanced, providing better handling and roadholding, lifting both safety and comfort levels.

With the entire drivetrain ahead of the front seats, design flexibility is further increased.

Above the Al-Ko galvanised chassis, the Trakkaway 830 body is built using fibreglass Styrofoam composite panels, thus giving much better strength, insulation and water resistance than polystyrene foam beading and plywood sheeting.

Above the walls, the roof is a one-piece fibreglass unit – not rubber – and has a relatively low height of three metres, something made possible by the low-level Al-Ko chassis.

Not to be forgotten are the external features, such as double-glazed hopper windows, large rear storage area, roll-out awning, twin wall lights, motorised skylights, reversing camera and slide-out barbecue.

The many double-glazed windows ensure everyone in the Trakkaway 830 can catch all the views and the

driver has excellent vision.

Inside the Trakkaway 830 is a layout built on experience. Like the external structure, the internal cabinetry work is master crafted for lightness and strength, using plywood construction with high-pressure laminate.

Floor-mounted airconditioning delivers the cooling air and there is also diesel heating for winter nights.

Four separate areas make up the internal living space. Up front the lounge/dining area has plenty of room to relax in comfort.

The modern kitchen naturally comes with the highest quality appliances.

The ensuite and bedroom can be partitioned from the living area and offers a separate shower and separate toilet cubicle with a comfortable island bed that has enormous storage under and twin wardrobes beside the bed.

A full 240/12V power system is built in that is backed up by 200 amp hours of deep-cycle house batteries, a 15-amp battery charger, 125W solar panel and a electronic control system.
